Buffalo International Fund

QUARTERLY
FACT SHEET

September 30, 2020

Fund Facts

	Investor	*Institutional*
Ticker:	BUFIX	BUIIX
Inception Date:	9/28/07	7/1/19
Expense Ratio:	1.05%	0.90%
Fund Assets:	$482.68 Million	
Category:	Foreign Large Growth	
Benchmark:	Morningstar Global Markets ex-U.S. Index	

Investment Strategy

- Utilize long-term, measurable, global and/or regional secular growth trends we anticipate to continue for 3-5 years.
- Identify premier international growth companies with strong management teams, little or no debt, free cash flow, scalable business models with a competitive advantage, a history of high and increasing margins, and attractive valuations.
- 65-85 positions across various market caps.

Investment Style

M.A. – Columbia University
B.A. – Univ. of Pennsylvania

The Fund's investment objectives, risks, charges, and expenses must be considered carefully before investing. The summary and statutory prospectuses contain this and other important information about the investment company and may be obtained by calling (800) 49-BUFFALO or visiting buffalofunds.com. Read them carefully before investing.

Mutual fund investing involves risk. Principal loss is possible. The Fund invests in small and mid-cap companies, which involve additional risks such as limited liquidity and greater volatility than large-cap companies. The Fund invests in foreign securities which involve greater volatility and political, economic, and currency risks as well as differences in accounting methods.

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating™ for a managed product is derived from a weighted average of the performance figures associated with its 3-, 5-, and 10-year (if applicable) Morningstar Rating™ metrics. The weights are: 100% 3-year rating for 36-59 months of total returns, 60% 5-year rating/40% 3-year rating for 60-119 months of total returns, and 50% 10-year rating/30% 5-year rating/20% 3-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent 3-year period actually has the greatest impact because it is included in all 3 rating periods. The Buffalo International Fund (BUFIX) received 3 stars among 420 for the 3-year, 4 stars among 336 for the 5-year, and 4 stars among 243 Foreign Large Growth funds for the 10-year period ending 9/30/20. © 2020 Morningstar, Inc. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. **Past performance is no guarantee of future results.**

The Morningstar Global Markets ex-US Index is designed to provide exposure to the top 97% of companies by market capitalization in each of two economic segments – developed markets (excluding the United States) and emerging markets. Russell Global ex-US Index measures the performance of the global equity market based on all investable equity securities, excluding companies assigned to the United States. One cannot invest directly in an index. Beta measures the volatility of the fund, as compared to that of the overall market. The Market's beta is set at 1.00; a beta higher than 1.00 is considered to be more volatile than the market, while a beta lower than 1.00 is considered to be less volatile. Alpha is an annualized return measure of how much better or worse a fund's performance is relative to an index of funds in the same category, after allowing for differences in risk. Market Capture Ratio is a statistical measure of the Fund's overall performance in up-markets (positive return periods) and down-markets (negative return periods). The market capture ratios are used to evaluate how well an investment performed relative to an index during periods when that index has risen or fallen. The Sharpe Ratio is a measure for calculating risk-adjusted return. Free Cash Flow is a measure of how much cash a business generates after accounting for capital expenditures. Market Cap is the market price of an entire company, calculated by multiplying the number of shares outstanding by the price per share. Each Morningstar category average represents a universe of funds with similar objectives. Sector Allocation may not equal 100% due to rounding. The Morningstar Style Box™ reveals a fund's investment strategy by showing its investment style and market capitalization based on the fund's portfolio holdings. Active share is a measure of the percentage of stock holdings in a manager's portfolio that differs from the benchmark index.

*Top Ten Holdings for the quarter are not disclosed until 60 days after quarter end. Those listed are as of 6/30/20. Fund holdings and sector allocations are subject to change and are not recommendations to buy or sell any securities.

Kornitzer Capital Management is the advisor to the Buffalo Funds, which are distributed by Quasar Distributors, LLC.
