3-yr Annualized Turnover Ratio	1.10%
Median Market Cap	\$97.94B
Weighted Avg. Market Cap	\$614.38B
30-day SEC Yield	1.83%

INVESTMENT STRATEGY

- Generate current income and long-term capital appreciation from a portfolio of 40-60 equity and debt securities.
- Find investment opportunities across asset classes and capital structures.
- Over time, management will rebalance the portfolio based on economic conditions and the risk/reward profile of each asset class.

GROWTH OF \$10,000

This chart illustrates the performance of a hypothetical \$10,000 investment made in the Fund on the Inception Date through 9/30/2025. Assumes reinvestment of dividends and capital gains. This chart does not imply future performance.

FUND MANAGEMENT

John Kornitzer *Manager since Inception 55 Years of Investment Experience*

Paul Dlugosch, CFA *Manager since 2011*26 Years of Investment Experience

The Fund's investment objectives, risks, charges, and expenses must be considered carefully before investing. The summary and statutory prospectuses contain this and other important information about the investment company and may be obtained by calling 800.492.8332 or visiting buffalofunds.com. Read them carefully before investing.

Mutual fund investing involves risk. Principal loss is possible. Investment by the Fund in lower-rated and non-rated securities presents a greater risk of loss to principal and interest than higher-rated securities. Investments in debt securities typically decrease in value when interest rates rise. This risk is usually greater for longer-term debt securities. Investments in foreign securities include additional risk such as greater volatility, and political, economic, and currency risks, as well as difference in accounting methods.

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating™ for a managed product is derived from a weighted average of the performance figures associated with its 3-, 5-, and 10-year (if applicable) Morningstar Rating™ metrics. The weights are: 100% 3-year rating for 36-59 months of total returns, 60% 5-year rating/40% 3-year rating for 60-119 months of total returns, and 50% 10-year rating/30% 5-year rating/20% 3-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent 3-year period actually has the greatest impact because it is included in all 3 rating periods. The Buffalo Flexible Allocation Fund (BUFBX) received 2 stars among 1,086 for the 3-year, 3 stars among 1,025 for the 5-year, and 2 stars among 842 Large Value funds for the 10-year period ending 9/30/2025. © 2025 Morningstar, Inc. The Russell 3000 Index is a market-capitalization-weighted equity index that seeks to track 3000 of the largest U.S.-traded stocks. One cannot invest directly in an index. Market Cap is the market price of an entire company, calculated by multiplying the number of shares outstanding by the price per share. Turnover Ratio is a measure of the fund's trading activity computed by taking the lesser of purchases or sales (excluding all securities with maturities of less than one year) and dividing by average monthly net assets. A turnover ratio of 100% or more does not necessarily suggest that all securities in the portfolio have been traded. In practical terms, the resulting percentage loosely represents the percentage of the portfolio's holdings that have changed over the past year. Benefits: A low turnover figure (20% to 30%) would indicate a buy-and-hold strategy. Market Capture Ratio is a statistical measure of the Fund's overall performance in up-markets (positive return periods) and down-markets (negative return periods). The market capture ratios are used to evaluate how well an investment performed relative to an index during periods when that index has risen or fallen. Alpha is an annualized return measure of how much better or worse a fund's performance is relative to an index of funds in the same category, after allowing for differences in risk. Beta measures the volatility of the fund, as compared to that of the overall market. The Market's beta is set at 1.00; a beta higher than 1.00 is considered to be more volatile than the market, while a beta lower than 1.00 is considered to be less volatile. The Sharpe Ratio is a measure for calculating risk-adjusted return. Duration is expressed as a number of years. Each Morningstar category average represents a universe of funds with similar objectives. Asset Allocation and Sector Allocation may not equal 100% due to rounding.

*Top Ten Holdings for the quarter are not disclosed until 60 days after quarter end. Those listed are as of 6/30/2025. Fund holdings and sector allocations are subject to change and are not recommendations to buy or sell any securities.
