Median Market Cap	\$89.18B
Weighted Avg. Market Cap	\$698.81B
% of Holdings with Free Cash Flow	63.86%
30-day SEC Yield	1.16%

INVESTMENT STRATEGY

- Seek primarily the generation of current income, with long-term growth of capital as a secondary objective.
- Perform in-depth, in-house research to identify 70-90 companies we believe have the highest risk-adjusted total return potential.
- Generate current income by investing in companies with sustainable competitive advantages that currently pay dividends and have a history of increasing these dividend payments over time. Identify additional companies that management believes are likely to initiate a meaningful dividend in the near future.

GROWTH OF \$10,000

This chart illustrates the performance of a hypothetical \$10,000 investment made in the Fund on the Inception Date through 3/31/2026. Assumes reinvestment of dividends and capital gains. This chart does not imply future performance.

The Fund's investment objectives, risks, charges, and expenses must be considered carefully before investing. The summary and statutory prospectuses contain this and other important information about the investment company and may be obtained by calling 800.492.8332 or visiting buffalofunds.com. Read them carefully before investing.

Mutual fund investing involves risk. Principal loss is possible. Investment by the Fund in lower-rated and non-rated securities presents a greater risk of loss to principal and interest than higher-rated securities. Investments in debt securities typically decrease in value when interest rates rise. This risk is usually greater for longer-term debt securities. Investments in foreign securities include additional risk such as greater volatility, and political, economic, and currency risks, as well as difference in accounting methods.

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a 3-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating™ for a managed product is derived from a weighted average of the performance figures associated with its 3-, 5-, and 10-year (if applicable) Morningstar Rating™ metrics. The weights are: 100% 3-year rating for 36-59 months of total returns, 60% 5-year rating/40% 3-year rating for 60-119 months of total returns, and 50% 10-year rating/30% 5-year rating/20% 3-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent 3-year period actually has the greatest impact because it is included in all 3 rating periods. The Buffalo Growth & Income Fund (BUFDX) received 2 stars among 1,212 for the 3-year, 3 stars among 1,122 for the 5-year, and 3 stars among 886 Large Blend funds for the 10-year period ending 3/31/2026. © 2026 Morningstar, Inc. The Russell 1000 Index is an unmanaged capitalization-weighted index of approximately 1,000 of the largest companies in the U.S. equity markets. One cannot invest directly in an index. The turnover ratio is the percentage of a mutual fund or other portfolio holdings that have been replaced in the course of one year. Some funds hold their equity positions for less than 12 months, meaning their turnover ratios exceed 100%. Market Cap is the market price of an entire company, calculated by multiplying the number of shares outstanding by the price per share. Free Cash Flow is a measure of how much cash a business generates after accounting for capital expenditures. Market Capture Ratio is a statistical measure of the Fund's overall performance in up-markets (positive return periods) and down-markets (negative return periods). The market capture ratios are used to evaluate how well an investment performed relative to an index during periods when that index has risen or fallen. Alpha is an annualized return measure of how much better or worse a fund's performance is relative to an index of funds in the same category, after allowing for differences in risk. Beta measures the volatility of the fund, as compared to that of the overall market. The Market's beta is set at 1.00; a beta higher than 1.00 is considered to be more volatile than the market, while a beta lower than 1.00 is considered to be less volatile. The Sharpe Ratio is a measure for calculating risk-adjusted return. Each Morningstar category average represents a universe of funds with similar objectives. Sector Allocation may not equal 100% due to rounding.

*Top Ten Holdings for the quarter are not disclosed until 60 days after quarter end. Those listed are as of 12/31/2025. Fund holdings and sector allocations are subject to change and are not recommendations to buy or sell any securities.
