3 REASONS TO CONSIDER THE BUFFALO FLEXIBLE ALLOCATION FUND

1

High-Quality Portfolio Focused on Dividends

Dividends are often seen as a sign of a company's financial health and stability, and we believe they are an important contributor to a portfolio's return over time. When considering the broad market as represented by the S&P 500 Index, 37% of the index's return over the past 20 years has resulted from dividends.

THE IMPORTANCE OF DIVIDENDS JUNE 2005 - JUNE 2025

Source: Morningstar

The Fund's flexible portfolio approach places high-quality, primarily large-cap companies front and center, emphasizing those with consistent, growing dividends. The Fund favors companies that are structurally sound, have conservative balance sheets,

generate ample free cash flow, and have strong management teams.

As of June 30, 2025, 99% of the Fund's portfolio holdings pay dividends, and 82% increased dividends in the last year.

2 A Flexible Portfolio

The Fund is a truly flexible allocation between equities and fixed income. The Fund's portfolio emphasizes high-quality equities and when invested in fixed income, primarily B rated debt securities of varying maturities, with an overall allocation designed to tactically adapt based on our view of relative opportunity.

BUFFALO FLEXIBLE ALLOCATION FUND

A Lower Risk Complement to a Core Portfolio

The Fund's investment process is focused on longterm results, with less dramatic swings along the way. As a result of our high-quality emphasis, the Fund has experienced less volatility over time.

The Fund's standard deviation, a measure of volatility, is lower than the Morningstar Large Value Category average for the 3-, 5- and 10-year periods, and the Fund has earned Morningstar's "Low" Risk Rating for the same periods.

Inception dates: BUFBX 8/12/1994, BUIBX 7/1/2019. Average annual total return represents past performance and is no guarantee of future results. Investment return and principal value will fluctuate and redemption value may be more or less than original cost. Fund performance current to the most recent month-end may be lower or higher than the performance quoted and can be obtained by visiting buffalofunds.com. ¹For performance prior to 7/1/19 (Inception Date of Institutional Class), performance of the Investor Class shares is used and includes expenses not applicable and lower than those of Investor Class shares.

The Fund's investment objectives, risks, charges, and expenses must be considered carefully before investing. The summary and statutory prospectuses contain this and other important information about the investment company and may be obtained by calling 800.492.8332 or visiting buffalofunds.com. Read them carefully before investing.

Mutual fund investing involves risk. Principal loss is possible. The Fund invests in small and mid-cap companies, which involve additional risks such as limited liquidity and greater volatility than large-cap companies. The Fund may invest in lower-rated and non-rated securities presents a greater risk of loss to principal and interest than higher-rated securities. Investments in debt securities typically decrease in value when interest rates rise. This risk is usually greater for longer-term debt securities. The Fund may invest in MLPs which are subject to certain risks inherent in the structure of MLPs, including complex tax structure risks, limited ability for election or removal of management, limited voting rights, potential dependence on parent companies or sponsors for revenues to satisfy obligations, and potential conflicts of interest between partners, members and affiliates. Investors should be aware of risks involved with investing REITs and real estate securities, such as declines in the value of real estate and increased susceptibility to adverse economic or regulatory developments. Dividends are not guaranteed and may fluctuate.

The Morningstar Rating™ for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a 3-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 23.5% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating™ for a managed product is derived from a weighted average of the performance figures associated with its 3-, 5-, and 10-year (if applicable) Morningstar Rating™ metrics. The weights are: 100% 3-year rating for 36-59 months of total returns, 60% 5-year rating/40% 3-year rating for 60-119 months of total returns, and 50% 10-year rating/30% 5-year rating/20% 3-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent 3-year period actually has the greatest impact because it is included in all 3 rating periods. The Buffalo Flexible Allocation Fund (BUFBX) received 2 stars among 1,088 for the 3-year, 3 stars among 1,028 for the 5-year, and 3 stars among 821 Large Value funds for the 10-year period ending 6/30/2025 based on risk-adjusted returns. © 2025 Morningstar, Inc. Morningstar Risk scores for a given time period (three, five, or 10 years) reflect the Fund's Morningstar risk score plotted on a bell curve: Monthly calculations are based on whether the Fund scores in the top 10% of its category, its risk score is considered High; if it falls in the next 22.5% Above Average; a place in the middle 35% is Average; those lower still, in the next 22.5%, are Below Average and the bottom Low. Overall Morningstar risk score is a weighted average of the available three, five, and 10 year Morningstar risk scores. Investments with less than three years of performance history are not rated.

The S&P 500 Index is a capitalization weighted index of 500 large capitalization stocks which is designed to measure broad domestic securities markets. The Russell 3000 Index is a market-capitalization-weighted equity index that seeks to track 3000 of the largest U.S.-traded stocks. One cannot invest directly in an index.

Free cash flow is a measure of the cash produced by the firm in a given period on behalf of equity holders. The true measure of the value of a firm's equity is considered to be the present value of all free cash flows. Standard deviation measures the distance from the mean in a set of data points, giving analysts an idea of the variance that could occur; used to illustrate volatility in a portfolio. Allocations are subject to change.
